# Low Noise, Low Voltage, High PSRR Low-Dropout 300mA Linear Regulator

AS9102

#### General Description

The AS9102 is a CMOS low dropout, low noise, high PSRR, low quiescent current positive linear regulator with input voltage down to about 1.80V. The AS9102 can deliver a guaranteed 300mA load current with a low dropout voltage at 250mV that optimized for battery-powered systems or portable wireless devices such as mobile phones. The shutdown function can provide remote control for the external signal to decide the on/off state of AS9102 that consumes less than 0.1uA during shutdown mode.

The device is suitable for portable application such as cellular handsets or PDA. The AS9102 is designed and optimized to work with low cost ceramic capacitors 1.0uF, which consumes less than 0.1µA during shutdown mode. Besides, its current limit protection and on-chip thermal shutdown function provide protection against any combination of over-load or ambient temperature which could cause junction temperature exceeding maximum rating. The AS9102 includes a reference bypass pin in order to reduce output noise and a logic control shut-down input.

The space-saving tiny SOT23-3L, SOT23-5L and DFN1010-4L packages are attractive for hand-held applications. The device is specified over an ambient temperature range of -40°C to 125°C.
